Claim 13 is withdrawn from consideration as a nonelected invention from paper #9.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 4-5, 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Aloni – US 6,346,442.

Aloni (Figs. 4-7 and text in col. 2, lines 2-8 and col. 3, line 45 to col. 8, line 27) discloses the claimed invention by fabricating an ONO layer in a memory cell by forming a bottom oxide 461, nitride 462, and oxidizing a top oxide layer 463. Aloni is clearly controlling the thickness of the deposited nitride layer by giving a thickness in a range of 80 to 200 Å. He also states the middle nitride layer functions as a charge storage or charge trapping region, and the top oxide layer promotes charge retention in the nitride layer 462 during operation. Although Aloni does not disclose oxygen to be introduced into substantially all of the nitride layer, the oxidation to form the

top oxide layer must necessarily introduce oxygen into the nitride layer because the thicknesses of the bottom oxide layer, deposited nitride layer, and top oxide layer are all within the ranges which are in claims 8-11. Aloni also teaches improving charge retention in a nitride layer of a memory cell, just as applicant has claimed.
